

Cameras for Videoconferencing

Improving videoconferencing

Increasingly, business appointments and meetings are conducted remotely via video conferencing.

In order to have a successful videoconferencing experience, it is important to use the right equipment and to ensure that the environment is suitable for videoconferencing. The key to a successful videoconference? Image and sound quality that allows for fluid and uninterrupted conversation as in a real situation.

Cameras for videoconferencing

Speechi offers a range of cameras specifically for video conferencing. From compact plug and play cameras to those with finely adjustable settings, they all share excellent video quality.

10

Wireless microphones

Some of the cameras shown above are equipped with microphones to provide a complete video conferencing solution. Depending on your application, it may be useful to add a wireless microphone - called a lapel microphone - that participants wear directly on their person, or to have a wireless videoconferencing speaker and microphone to place in the centre of the room for collaborative work in conversation mode.

Cameras for videoconferencing

Whether you choose our compact or our desktop models, our range of videoconferencing cameras all feature excellent resolution, microphones and preset shots, manageable by remote control.
